

TUCOR EVENT CENTER

Tucor™ Event Center (TEC) software package is an automated call handling system that answers and records event messages generated by Tucor irrigation controllers. The software supports Caller ID and records time and date with the event in a standard text file. After recording an event, TEC displays a button on the Window's toolbar and generates an audible alarm. The log can be easily viewed by clicking on the button. An Excel spreadsheet is provided for data manipulation and customized displays and reports.

Tucor Event Log Text File

Visual Alarm Button

Excel View

FEATURES:

- Completely automated—answers and records events in Windows background.
- Generates both a visual alarm and audible alarm on the host computer after recording an event.
- Uses the Interactive Voice Guide (IVG) software from Voice Call Central.
- Records Caller ID data, time, date and event code in a comma delimited text file. Text file can be viewed with standard programs such as Note Pad, and the text file can be easily imported into other programs such as Microsoft Excel and Microsoft Access for data manipulation and historical storage.
- Provided with an Excel spread sheet with “one-button” data access.
- Tucor software package includes a Voice Modem with drivers. Modem drivers provided for WIN 98SE/NT/2000/ME/XP

ORDERING INFORMATION:

TEC Tucor Event Center software package *including* voice modem, modem drivers, and Tucor recording scripts.

NOTE: IVG is a licensed product for a single computer and must be registered with Voice Call Central. Contact Tucor for ordering and registration details.
