RKD ET OPTIONS

Tucor ET-200

Davis Instruments Vantage Pro2

Irrisoft Weather Reach WR-T & WR-TB

Tucor ET-200

The Tucor ET-200 Weather Station is intended for those sites that require their own weather station. The ET-200 is a direct connect station that produces a pulse output for both ET and rain.

Davis Instruments Vantage Pro2

The Davis Instruments Vantage Pro2 is a low cost alternative for onsite weather stations. The Vantage Pro2 produces a pulse output for both ET and rain. The Vantage Pro2 can be ordered directly from Davis Instruments.

Irrisoft Weather Reach

The Irrisoft Weather Reach WR-T and WR-TB has been modified exclusively for use with Tucor products. Both the WR-T and WR-TB provide an ET and rain pulse directly to the RKD controller. The RKD controller provides a 16v power source for internal installation of the Terminal Board. Special software and cabling are provided for system activation and management. 3rd party service providers are required for activation and ET service.
